
The
"DRY" ETHYL
gasoline

BOTH "DRY"

They're both "dry"—the *new* and *better* Texaco Gasoline and Texaco-Ethyl. And this is exactly what "dry" means—When your foot gives the signal to start, you start, *right then!* When you step on the accelerator you get what you ask for, more speed, *in a hurry!* The slightest command to the engine is obeyed, instantly. And you'll enjoy the way a gallon stretches out over more miles . . . .

A "dry" gas does these things—

because it enters the cylinders as a completely vaporized mixture. There are no wet drops of raw gasoline to hold back the action . . . . What goes into the cylinders goes to work —all of it! . . . . There should be no room in your tank for a lazy "wet" gas. Fill with Texaco—the live "dry" gas. Either the *new* and *better* Texaco or Texaco-Ethyl. They're both "dry." Pick your pump today.
